

DENON

For Immediate Release

HIGH-VALUE, HIGH-PERFORMANCE NEW DENON® 5.1 CHANNEL HOME THEATER SYSTEM MAKES IT EASIER AND MORE AFFORDABLE TO UPGRADE TO AMAZING SURROUND SOUND – RIGHT OUT OF THE BOX!

-- 650-Watt System Brings Together Two of the Most Trusted Audio Brands, Denon and Boston Acoustics, in One Powerful Package --

Mahwah, NJ, April 25, 2012 — Denon Electronics, a premier manufacturer of high-quality audio and home entertainment products, is proud to announce the availability of its **DHT-1513BA Home Theater System** (SRP: \$599.99), a powerful yet compact turnkey solution that combines an advanced Denon A/V receiver and amplifier with six acoustically matched Boston Acoustics loudspeakers for a room-filling surround sound experience. Designed for total simplicity of set-up and use, the DHT-1513BA dramatically enhances the enjoyment of movies, music and games right out of the box.

Yoshinori Yamada, Product Manager for Denon core products, noted: “Many consumers today are looking for a way to enjoy truly great and immersive surround sound with their home entertainment – but they don’t want to break the bank to do it. With the debut of our high-value, high-performance DHT-1513BA system, we are making it easier and more affordable than ever to upgrade to an amazing sound experience. As soon as you get this system home, you will be able to enjoy a cinematic and detailed soundstage that’s ideal for movies, music and video games.”

Room-Filling Sound Quality – in a Smarter, Smaller Package

Denon’s DHT-1513BA system features a slimmer, vibration-resistant chassis design twenty percent smaller than previous Denon home theater systems, making it ideal for easy installation in virtually any room. DHT-1513BA offers simple and intuitive ways to

incorporate more personal audio/video content from smartphones, digital cameras, via easily accessible front-panel HDMI input.

The powerful DHT-1513BA system utilizes a set of four Boston Acoustics satellite speakers, one center-channel speaker, and one down-firing subwoofer, all optimized for use with one another. The result is a dramatic, expansive soundstage. Notably, the subwoofer features BassTrac circuitry, which delivers tight, precise bass response by eliminating low-frequency distortions. In addition, the speakers feature a diffracting architecture that is designed to fill every corner of the room with great sound.

Premium Audio Technologies Create Convincing Soundstage

The DHT-1513BA's built-in receiver is outfitted with several audio technologies to ensure an immersive surround sound experience. With equal power amp design, each of the receiver's five channels is powered by its own discrete circuitry. This allows the receiver to reproduce original sounds more faithfully than those which use integrated circuits. Additionally, thanks to its four HDMI inputs, the system lets users route multiple high-definition devices, including set-top boxes, game consoles and Blu-ray players, directly to their TV. Users can also connect all of their devices to the display with a single HDMI cable effectively reducing cable clutter.

Finally, thanks to its ability to pass through 3D signals from a Blu-ray player, users can enjoy true "future-readiness," with the assurance that they will be able to enjoy the maximum benefits of today's emerging 3D video technologies.
