DENON'S COMPACT NEW D-M39S DESKTOP MUSIC SYSTEM BRINGS GREAT BIG SOUND TO SMALL SPACES!

-- All-in-One Music System Delivers Powerful Denon Sound Quality; Full Range of Connectivity Options Includes USB Port for iPod and iPhone --

Indianapolis, IN, September 5, 2012 – Denon Electronics, a premier manufacturer of high-quality home entertainment components, is making superb audio performance available to discerning music lovers even when space is at a premium with its compact yet powerful **D-M39S Desktop Music System** (SRP: \$399.99). Reflecting the D+M Group's guiding philosophy, "Performance is Everything," the all-in-one D-M39S music system provides a rich and immersive Denon® music listening experience, and includes a host of connectivity options so users can easily access all their favorite music, from whatever source. The D-M39S Desktop Music System is available now.

Seamless, Easy Connectivity to Today's Popular Music Sources

In addition to its built-in high-performance CD player, which also allows playback of popular music file types including MP3 and WMA, the D-M39S's extensive array of connectivity options includes a stereo line input, as well as an optical digital input for an audio source such as HDTV, Blu-ray, cable or satellite tuner. The front panel also features a USB port for direct connection to portable digital devices and thumb drives, and is compatible for connection to an iPhone or iPad. When an iPod, iPod touch, iPhone or iPad is connected during use, the system charges the device. Notably, even during standby mode, the unit continues to charge the device until it's fully charged, then returns to normal energy-saving standby mode of lowest power consumption (less than 1/3 watt).

The D-M39S system was designed for total user flexibility and ease-of-use. Its built-in FM stereo tuner features 40 station presets, with an automatic timer play function that can be set to activate daily or one time, along with a sleep timer function. The dimmable front panel display features a high resolution two-line alpha-numeric readout of music track titles as well as radio station information, and the remote control provides easy control of all major functions, with direct source selection buttons along with an intuitive keypad design.

Powerful Denon Audio Section in All-in-One Compact Music System

Despite its compact and unassuming size, the elegant D-M39S Desktop Music System boasts a powerful audio amplifier section that delivers a robust 30W + 30W of power. The digital audio section features the latest 192 kHz/32 bit D/A conversion technology for crystal clear reproduction of high resolution audio formats. The matching speakers feature high power woofers paired with high resolution wide dispersion soft dome tweeters. The woofers feature die cast alloy frames with massive magnetic motor structures that help deliver deep powerful bass response, and the wide range tweeters feature response extending to 40 kHz for optimum reproduction of high resolution music file formats.

The main system unit includes adjustable bass and treble controls, and features Denon's exclusive Super Dynamic Bass technology for improved deep bass definition, allowing a full range sound quality even at reduced volume levels. For listeners who want to add an extra layer of low-frequency punch, there's a subwoofer output as well, and all speaker connections feature heavy duty multi-way binding posts.

Yoshinori Yamada, Product Planning Manager for D+M noted: "Today's discerning music fan is looking for ways to enjoy a true high-quality listening experience anywhere and anytime. By utilizing the very latest innovations in audio technology and design, our Denon engineers have been able to create a system that truly delivers on the Denon promise of exceptional music performance – and fits easily virtually anywhere. This new music system is perfect for desktop use, or as a second audio system in a bedroom, den or kitchen."
